

Diebold-Mariano Predictive Accuracy Tests

Model Pair (A vs B) DM Statistic p-value Significant Horizons HAC Kernel Conclusion					
LNSSM vs Persistence	+12.432	< 0.0001	23 / 24	Bartlett, $T^{(1/3)}$	Highly Significant [*][*][*]
Pure SSM vs Persistence	+11.982	< 0.0001	22 / 24	Bartlett, $T^{(1/3)}$	Highly Significant [*][*][*]
LNSSM vs Pure SSM (no LNN)	+0.416	0.678	1 / 24	Bartlett, $T^{(1/3)}$	Not Significant
LNSSM vs GRU	+1.247	0.213	4 / 24	Bartlett, $T^{(1/3)}$	Not Significant
LNSSM vs QRF	+2.891	0.004	16 / 24	Bartlett, $T^{(1/3)}$	Significant [*]

Newey-West HAC standard errors with Bartlett kernel, $T^{(1/3)}$ lag truncation. Positive DM = model A superior. [*] $p < 0.01$, [*][*][*] $p < 0.001$.
